

We offer a wide variety of solutions for panel processing, CNC machining and material handling for the plastic, Non-ferrous, composite, solid wood and the wood composite manufacturing industries. We focus our efforts on finding the correct solutions for your specific applications ultimately providing you better efficiency, quality for your customer and more profitability. Our goal is your success.

Below are areas that we may be able to help you.

- CNC Nested Routers
- CNC Machining Centers
- Wide Belt Sanders
- Edgebanders
- Horizontal Beam Saws
- Vertical Saws
- Dowel Insertion
- Vacuum Lifts/Lift Tables
- Conveyor>Returns
- Stacking/De-Stacking
- Part Flipping/Rotating
- Pocket Cutters
- Line/Construction Boring
- Optimizing/Defecting Saws
- Moulders Straight and Arch
- Solid Wood Processing
- Clamping Equipment
- Planers and Jointers
- Table Saws and Rip Saws
- Abrasives/Tooling/Supplies
- Dust Collection Systems
- Air Compressor Systems
- Technical Support/Training
- Custom Designed Solutions

Below you will find a sampling of many of the great vendors that we represent.

Advantage Solutions, Inc., 28081 - 220th Street, Wabasso, MN 56293

Services that we can provide for you

- 1) **We offer local factory certified technicians, training and support for our products.** This helps us remain reactive to your needs in the instance you are down and need to be up and running in short order.
- 2) **We offer compressed air system layout, design and energy audits (see note).** Proper engineered compressed air pipe layout is something that is rarely considered and can have adverse results on your air flow especially at high use times we can assist you in choosing the right pipe configuration and sizing to meet your needs. We also pride ourselves in providing a complete solution not only for compressed air but one that manages moisture, excessive oil and particulates.

With a properly designed system, we can help:

- extend the life of your pneumatic tools,
- provide you with more consistent air flow
- create more energy efficiency
- extend the life of your compressor / air drying system
- achieve better finish quality in your paint room
- create a safer, OSHA compliant work place by replacing out dated pvc air line that is no longer in regulatory compliance.

Note: Often an energy audit is required by your electrical company to see if you qualify for grants and any other special programs.

- 3) **We offer dust collection system layout and design.** Even a great dust collector will perform inefficiently with poorly engineered pipe layout. Let us help you optimize your system, often we find that the pipe was either done wrong in the beginning or was added onto without considering the ramifications to the rest of the system. Both can result in inadequate dust collection with poor suction, noisy operation and/or poor line velocity which can result in plugged pipe work. Other times we see selections of dust collector inappropriate for the job at hand which can result in premature filter restriction. Clean, inspect, maintain and periodically replace your filters when needed. Contrary to popular belief, filters do need to be replaced.
