## INFINITE ADVANTAGES. INFINITE POSSIBILITIES.

Imagine a solid metal piping system that offers superior strength within a lightweight design. A system that's easy to install, yet ensures high performance and versatility. At Applied Systems Technologies, that's just what we did to create Infinity - the first all-metal, quick-connect piping system at an affordable price.

Heralded for its innovative design, Infinity offers the performance of heavy, traditional steel piping, at the cost of systems using plastic. Its revolutionary lock-and-seal design ensures a totally safe, leak-free system for all compressed air, vacuum, and inert gas applications.

## Getting Down to Brass Facts

The heart of Infinity is solid brass, nickel-plated fittings that make the system easy to use and install. Infinity's powder-coated aluminum pipes are so light, that they can be handled and installed by one person. Yet when coupled with solid brass fittings, the system yields unbeatable performance and reliability.

## Making Connections That Last

Unlike plastic piping systems which fail with age and wear, Infinity provides reliability and durability that can only be achieved through an all-metal system - plus some unique advantages.

- Fittings can be disconnected and reconnected for reuse.
- Leak-free connectors provide an immediate, unbreakable seal.
- Lightweight piping remains unaffected by contaminants in the air.

## Installation That's a Snap

Infinity offers the easiest, fastest installation available. There's no welding, gluing or threading, and very little skill is needed for a professional installation. In fact, a simple pipe cutter and de-burring pipe reamer are the only tools required.
"Having a totally metal design provides an integrity that cannot be matched by any other system."

## Ready for Anything

With six different piping sizes, Infinity is a sure fit for virtually any industrial and OEM application, including aerospace, automotive, chemical processing, electronics, engineering, food and beverage, packaging, pharmaceuticals, and textiles. Our standard, color-coded design affords three separate systems that can be easily identified by staff members:

- Blue for compressed air
- Grey for vacuum
- Black for inert gases

## INSTALLATION OF PIPING

2

## IMPORTANT - Only for installation of piping diameter 50 and 63

1. Remove burrs from the outside diameter of the tube. Clean and remove any shavings.
2. Add oil on tube before inserting the fitting.
3. Fittings D20, D25, D32 and D40mm are supplied fully assembled. Insert the tube into the fitting. To make insertion easier, rotate the tube on itself while making the connection. Be sure tubing is securely inserted in the fitting.

| Diameter | Torque |
| :---: | :---: |
| 20 | $300 \mathrm{cN} . \mathrm{m}(26 \mathrm{in}-\mathrm{lbs})$ |
| 25 | $300 \mathrm{cN} . \mathrm{m}(26 \mathrm{in}-\mathrm{lbs})$ |
| 32 | $400 \mathrm{cN} . \mathrm{m}(35 \mathrm{in}-\mathrm{lbs})$ |
| 40 | $650 \mathrm{cN} . \mathrm{m}(58 \mathrm{in}-\mathrm{lbs})$ |

4. Only for tube diameters D50 and D63mm. To facilitate installation, fittings are supplied with unscrewed nuts. Once the tube is inserted into the fitting, tighten the nuts to the torque specified below.

| Diameter | Torque |
| :---: | :---: |
| 50 | 65 N.m (48 ft-lbs) |
| 63 | 65 N.m (48 ft-lbs) |

5 Before pressurizing a piping system, please read and fully understand the requirements of the "INFINITY TEST PROCEDURE." Failure to comply with the requirements of the test procedure could lead to serious injury or property damage.

An INFINITY TEST PROCEDURE document is provided with every shipment of parts and can also be dowloaded from our website www.appliedsystemtech.com

## FLOW RATES THROUGH INFINITY PIPING

| Pipe Internal Diameter |  | CFM | CFM | CFM | CFM |
| :---: | :--- | :---: | :---: | :---: | :---: |
| mm | (in.) | @ 125 psi | @ 150 psi | @ 175 psi | @ 220 psi |
| 20 mm | $\left(0.75^{\prime \prime}\right)$ | 36 | 39 | 42 | 48 |
| 25 mm | $\left(1^{\prime \prime}\right)$ | 76 | 81 | 88 | 99 |
| 32 mm | $\left(1.25^{\prime \prime}\right)$ | 146 | 158 | 171 | 189 |
| 40 mm | $\left(1.5^{\prime \prime}\right)$ | 266 | 291 | 310 | 348 |
| 50 mm | $\left(2^{\prime \prime}\right)$ | 476 | 881 | 965 | 565 |
| 63 mm | $\left(2.5^{\prime \prime}\right)$ |  |  | 1047 | 627 |

Flow rates are based on a 1 psi pressure drop per 100 ft run of pipe and couplings in a "straight line."
For loop systems, flow rates can be doubled.

## Example:

100 ft run of 2 " pipe flows 476 cfm at 125 psig with a pressure drop of 1 psig. If a system is designed in a loop configuration, a flow of 952 cfm with a pressure loss of 1 psig per 200ft of piping and couplings can be achieved. The 1 psi pressure loss will only occur if the compressor system is flowing the maximum flow capacity of the piping selected.

Flows are measured at standard atmospheric conditions: $1013 \mathrm{mbar}(14.7 \mathrm{psi})$ at $20^{\circ} \mathrm{C}-\left(68^{\circ} \mathrm{F}\right)$.
It is vital that the size of the piping between the compressors and the connection of the loop system can flow the full capacity of the combined compressor output.

## Testing

Infinity tube fittings are tested in accordance with the requirements of ANSI B31.1 (American National Standards Institute) Power Piping Systems.
All Infinity products have been tested and exceed the requirements of ANSI B31.1.
Infinity product provides a 5 X safety factor above recommended safe working pressure/temperatures.

## OUTLET/REDUCING TEE FITTING

The fitting is a valid alternative to the traditional swan neck, and proves itself as a fast and low-cost solution. The efficient internal system allows air to reach the point-ofuse and drain toward the most convenient low point of the system, so that no moisture stays within the main circuit.

This fitting is also an alternative to a traditional goose neck (up and over) take-off point. It prevents water from dropping out of the main piping loop into the drop line. All systems should be installed with a slight gradient to allow moisture to collect at one point in the system. This point should be fitted with a drop line and terminated with a condensate drain.
